The Age of Plastic

Five thousand years from now a geologist will chip away at a rock formation. Cracking the outer layer will reveal the various strata of sedimentation. Igneous rock formed on top of metamorphic rock which itself formed on limestone, etc. This will be expected by the geologist. However, less than an inch from the top is something unanticipated.

Blog report

(updated below)

So sorry for my absence over the last few weeks. I have two new posts upcoming in the next day or so, as well as 5 others planned and/or outlined. Hope you're doing well. Come back for those posts on Monday or Tuesday at the latest. Cheers.

What's Going On?

The other day I was really down in the dumps. Disappointment, frustration, and boredom conferred to offer me a horrible cup of coffee. I would remain down, drinking my crappy coffee, until I was confronted with a vast epiphany. All the world came together. Brothers and sisters who had once grown apart were now together. Obama and Boehner no doubt played another round of golf. The moon and stars conferred to offer me a lighted path. Eternal enemies assisted one another as allies. It seemed as if all of nature had extended its glorious hand to me for the warmest of greetings. What's going on?

Marvin Gaye, that's what.
